## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Di(tert-butylperoxyisopropyl)benzene competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Crosslink Agent BIPB production reached approximately 37,069 tons, with an average global market price of around US\$9000 per ton. Di(tert-butylperoxyisopropyl)benzene (BIPB) is an organic peroxide crosslinking agent, appearing as a colorless to pale yellow transparent liquid, characterized by a high decomposition temperature and good storage stability. Upon heating, it decomposes to generate free radicals, enabling the crosslinking of polymer chains such as polyolefins. This process enhances the heat resistance, mechanical strength, and chemical stability of materials. BIPB is widely applied in crosslinked polyethylene (XLPE), thermoplastic elastomers (TPE), cable insulation compounds, and foamed materials. Di(tert-butylperoxyisopropyl)benzene (BIPB) is a high-temperature organic peroxide crosslinking agent with a positive market outlook. Compared with commonly used peroxides such as dicumyl peroxide (DCP), BIPB offers a higher and more controllable decomposition profile and a wider processing window, making it better suited to high-temperature extrusion and longer residence-time processes. It generally produces fewer volatile by-products and lower residues, which improves final product electrical properties, thermal-aging resistance and odor characteristics; its superior thermal stability and storage performance also simplify industrial handling and logistics. Market trends emphasize system-level solutions?tailored peroxide grades, complementary additives or masterbatches, and stronger technical service?to expand processing latitude and minimize residues. Regulatory and occupational-safety expectations push suppliers to validate decomposition behavior and handling protocols. While alternative crosslinking methods exist, BIPB?s ease of integration into existing

extrusion lines, material compatibility and process robustness make it a practical substitute where DCP's narrower window or higher residue profile is limiting. Overall, BIPB is well positioned to replace DCP in higher-performance, higher-temperature applications and to expand into cable, piping, foam and other premium segments.

The global Di(tert-butylperoxyisopropyl)benzene market size was estimated at USD 334.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
