### Report Overview

A diving semi-dry suit is a kind of clothing specially designed for diving sports. It is between a full dry suit and a wet suit. Semi-dry suits are usually made of wetsuit materials, such as neoprene or neoprene, which have better thermal insulation properties. Unlike wetsuits, semi-drysuits generally have better sealing and insulation properties because they fit better against the body and reduce the inflow of water. Semi-dry suits are generally less waterproof than fully dry suits, but they are easier to put on and take off and provide better insulation than wet suits. They often come in vest-style or full-body designs, and some even come with additional insulating linings. The choice of semi-dry suit usually depends on the diver's personal preference and the temperature and conditions of the diving environment. Diving semi-dry suits are widely used in diving sports, especially in colder waters or longer diving activities. They can provide comfortable insulation and reduce the inflow of water, allowing divers to last longer. The earth moves underwater.
