### Report Overview

DMDM Hydantoin is a preservative widely used in personal care and cosmetic products, such as shampoos, conditioners, lotions, and makeup, to extend shelf life by inhibiting microbial growth. It functions as a formaldehyde-releasing agent, gradually breaking down to release small amounts of formaldehyde, which acts as an antimicrobial. While effective in preventing spoilage and contamination, its use has faced scrutiny due to potential skin irritation and concerns over long-term exposure to formaldehyde, leading some brands to phase it out in favor of alternative preservatives. The market for DMDM Hydantoin is influenced by regulatory standards, consumer demand for safer formulations, and the growing preference for clean-label and preservative-free beauty products.
