Abstracts

DNA and RNA oligonucleotide synthesizers are instruments designed to create synthetic oligonucleotide sequences. The resulting DNA or RNA oligos are used in molecular applications, such as primers for PCR amplification, PCR assays, sequencing, or as hybridization probes. Oligonucleotide synthesizers generally operate as column-based systems utilizing a repetitive, cyclic process of reagent flow through. However, other platforms can use a different mechanism, such as cartridge and chip technology. Synthesizers often come with dedicated operating software, such as those that feature tools for flexible design and management of the synthesis procedure. These instruments are a useful addition to any molecular research team with a need for specialized DNA or RNA oligonucleotides.

The global Dna And Rna Oligonucleotide Synthesizers market size was estimated at USD 535.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.45% during the forecast period.
