Report Overview

Dodecyltrichlorosilane, also known as n-dodecyltrichlorosilane or 1-dodecyltrichlorosilane, is an organosilicon compound with the chemical formula $C_{12}H_{25}SiCl_3$. It is a colorless to pale yellow liquid at room temperature and is insoluble in water. This compound is primarily used as a coupling agent in the production of composite materials, particularly in the reinforcement of plastics with glass fibers. It functions by forming a strong bond between the inorganic glass fibers and the organic polymer matrix, enhancing the mechanical properties and durability of the composite. Dodecyltrichlorosilane is also employed as a silylating agent in the synthesis of various organosilicon compounds and as a surface modifier to improve the hydrophobicity and adhesion properties of materials. Due to its reactivity with moisture, it is typically handled under anhydrous conditions and stored in airtight containers.
