Abstracts

Donning surgical gloves with wet hands is a special technique used primarily in the pre-operative preparation phase, where sterile surgical gloves are quickly and effectively donned by specific methods when the hands of medical personnel are wet. This technique usually involves placing a certain amount of sterile water inside the glove in advance, so that the glove can be fully expanded, so that the wearer can smoothly insert the wet hand into the glove. The goal is not only to ensure that the donning process is done efficiently with wet hands, but also to ensure that the sterility of the gloves is not compromised, thus reducing the risk of surgical infection.
