Report Overview

A Door Contact Switch is a type of electrical switch that is specifically designed to detect the status of a door, whether it is open or closed. It is commonly used in security systems, automation systems, and building management systems to monitor and control door access. The switch typically consists of two metal contacts that are either in contact with each other when the door is closed or separated when the door is open. When the door is opened, the switch changes state, sending a signal to the connected system to indicate the change in door status. This allows for real-time monitoring and control of door openings, which is crucial for security purposes and ensuring the proper functioning of automated systems. The Door Contact Switch can be wired or wireless, and it may also feature additional capabilities such as tamper detection or integration with other security devices.
