Report Overview

DOPO Modified Epoxy Resin is a specialized type of epoxy resin that has been chemically modified with DOPO (9,10-dihydro-9-oxa-10-phosphaphenanthrene-10-oxide), a compound known for its flame retardant properties. This modification enhances the resin's thermal stability and fire resistance, making it suitable for applications where high-performance materials are required to withstand extreme temperatures and prevent the spread of flames. The DOPO group's incorporation into the epoxy resin structure not only improves the material's inherent flame retardancy but also contributes to its char-forming ability during combustion, which helps to insulate and protect underlying materials from heat and fire damage. This product is often used in high-performance coatings, adhesives, and composite materials where both mechanical strength and fire safety are critical.

In 2024, the global DOPO Modified Epoxy Resin market is projected to reach approximately USD xx Million, with expectations to grow at a compound annual growth rate (CAGR) of around xx between 2024 and 2033.
