Report Overview

The double column pallet stacker is a specialized material handling equipment designed for lifting and transporting palletized goods in warehouses, distribution centers, and manufacturing facilities. It features a twin-mast design that provides enhanced stability and lifting capacity compared to single-column stackers, making it suitable for handling heavier loads (typically ranging from 1,000 to 3,000 kg) at heights of up to 6 meters. These stackers are often electrically powered, offering maneuverability and efficiency in narrow aisles, and may include features such as load-sensing hydraulics, ergonomic controls, and compact turning radii to optimize productivity. They serve as a cost-effective alternative to forklifts in environments where space constraints or budget limitations exist, catering to industries like retail, logistics, and food & beverage. The market demand is driven by the growth of e-commerce, automation in warehousing, and the need for energy-efficient equipment.
