### Report Overview

A Double-layer Orbital Shaker is a laboratory equipment designed for mixing, agitating, or oscillating samples in various applications such as cell culture, molecular biology, and biochemistry. This device typically consists of two layers to accommodate multiple samples simultaneously, enhancing efficiency and productivity. The orbital motion refers to the circular or elliptical shaking pattern that the platform follows, which ensures thorough and consistent mixing of samples. This shaking motion can be adjusted in terms of speed and angle, allowing for customization based on the specific requirements of the experiment. The double-layer design allows for increased sample capacity, while the orbital shaking mechanism ensures even distribution of nutrients and gases, which is crucial for maintaining the integrity and viability of samples during extended periods of incubation or processing.
