### Report Overview

The double-port optical fiber stripper is a specialized tool used in the telecommunications and fiber optics industry to precisely remove the protective coating from optical fibers without damaging the core or cladding. It features two ports—typically designed for different fiber diameters—allowing technicians to work with multiple fiber types efficiently. This tool is essential for splicing, termination, and repair processes, ensuring minimal signal loss and maintaining fiber integrity. Its precision and dual-port design cater to high-volume or varied applications, making it a critical instrument for network installers, data center operators, and maintenance teams. The market for these strippers is driven by the expanding fiber optic infrastructure, 5G deployment, and increasing demand for high-speed internet, with key demand coming from telecom providers, ISPs, and enterprise networks. Competition centers on durability, ergonomics, and compatibility with emerging fiber standards, while innovations focus on automated stripping and integration with splicing tools. Regional growth is strongest in Asia-Pacific and North America, fueled by government broadband initiatives and private sector investments in next-gen networks.
