Report Overview

Double Side PE Coated Paper is a type of paper product that has undergone a specialized manufacturing process to enhance its properties and applications. This paper is coated on both sides with a layer of polyethylene (PE), a thermoplastic polymer known for its moisture resistance, flexibility, and durability. The PE coating provides a smooth, non-absorbent surface that is ideal for printing and writing, as it prevents ink from bleeding or feathering. Additionally, the coating makes the paper more resistant to tearing and provides a barrier against moisture, making it suitable for various packaging and labeling applications. The double-sided coating ensures that both sides of the paper have the same high-quality finish, which is particularly useful in applications where the paper's appearance and performance are critical on both sides.
