Report Overview

A DPSS gain module (Diode Pumped Solid State gain module) is a laser device that uses a diode laser as a pump source to enhance the emission capability of a solid-state laser medium. It consists of a diode laser, an optical coupling system, a gain medium (such as Nd:YAG or Nd:YLF crystal), and a heat sink. The DPSS gain module achieves effective pumping of the gain medium through precise control of the diode laser, resulting in high-power, high-quality, and high-stability laser output. This module finds wide applications in fields such as lidar, laser cutting, medical surgery, and scientific research.
