Report Overview

Dried seahorse is a traditional medicinal product derived from marine seahorses (genus *Hippocampus*), which are typically sun-dried or processed for use in traditional Chinese medicine (TCM) and other alternative health practices. Valued for its purported therapeutic properties, dried seahorse is believed to treat ailments such as asthma, kidney disorders, and impotence, often ground into powders or steeped in tonics. The market for dried seahorse is heavily influenced by demand in East and Southeast Asia, particularly China, where it has been used for centuries. However, overharvesting and habitat destruction have led to declining wild populations, prompting international trade restrictions under CITES (Convention on International Trade in Endangered Species). Despite conservation efforts, illegal trade persists due to high market value, with prices ranging from \$600 to \$3,000 per kilogram depending on species and quality. The industry faces growing scrutiny from environmental groups and regulatory bodies, while aquaculture initiatives attempt to provide sustainable alternatives, though farming seahorses remains challenging. Consumer demand remains strong among TCM practitioners, though younger generations increasingly question its efficacy and ethical sourcing. The market's future hinges on balancing cultural traditions with conservation and stricter enforcement of trade laws.
