## Abstracts

Drone Flight Show is an art form that uses programmed control to maneuver a large swarm of drones equipped with LED lights into precise formations in the night sky, creating complex and dynamic light arrays. Its core is based on high-speed wireless communication, RTK high-precision positioning, and intelligent swarm control algorithms, ensuring millisecond-level synchronization of the position and attitude of each drone in three-dimensional space. The performance is typically coordinated by a ground control station, enabling smooth switching and dynamic evolution of text, logos, 3D models, and other patterns, combining a sense of technology with artistic expression. This format has gradually replaced some traditional fireworks, becoming an innovative display medium for city celebrations, brand events, and cultural tourism projects, with its core competitiveness being an environmentally friendly, safe, and repeatable digital visual experience. The global development of Drone Flight Shows exhibits a three-tiered structure. China, with its complete industry chain and mature cluster control technology, firmly holds the top tier, leading globally in performance scale, frequency, and application breadth, widely serving urban promotion and the commercial sector. North America and Europe form the second tier, focusing on high-end brand marketing and artistic creation, possessing top-tier creative design capabilities, and operating under extremely stringent industry regulations. Emerging markets in the Asia-Pacific region and the Middle East constitute the third tier, rapidly emerging. The Middle East is driven by demand for luxury celebrations, while many Southeast Asian countries are gradually introducing it into their tourism industries as an important tool for showcasing a technologically advanced image.

The global Drone Flight Show market size was estimated at USD 278.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.60% during the forecast period.
