Abstracts

Drug coated coronary balloon catheter is a medical device used to treat coronary artery disease, especially coronary artery stenosis or occlusion. It combines traditional coronary balloon catheter and drug coating technology, aiming to improve blood flow patency and prevent restenosis by dilating blood vessels and releasing drugs. A drug coating is a layer of drugs that covers the surface of a balloon catheter. These drugs can be released into the tissue surrounding the blood vessel wall through the balloon catheter, inhibiting the proliferation of neovascular endothelial cells and reducing the risk of restenosis.

The global Drug Coated Coronary Balloon Catheter market size was estimated at USD 1580.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
