Report Overview

A Dry Freight Intermodal Container is a standardized, reusable, and stackable transportation unit designed to facilitate the efficient and secure movement of goods across various modes of transport, such as road, rail, and sea. These containers are typically made of corrosion-resistant materials like corten steel or aluminum, ensuring durability and longevity. They are characterized by their dry cargo capacity, which means they are primarily used for non-perishable goods and are not equipped for temperature control. The containers come in various sizes, with the most common being 20 feet and 40 feet in length, and are equipped with locking systems for security. They are designed to be easily loaded and unloaded, and their intermodal nature allows for seamless transfer between different transportation modes without the need to rehandle the cargo, thereby reducing costs and increasing efficiency in the logistics and supply chain industry.
