Report Overview

Dry mouth lozenges are medicated or therapeutic candies designed to alleviate symptoms of xerostomia (dry mouth) by stimulating saliva production or providing temporary moisture relief. These lozenges typically contain ingredients like xylitol, sorbitol, or other saliva-stimulating agents, often combined with soothing elements such as aloe vera or essential oils. The product serves a niche yet growing market, primarily driven by an aging population, increased prevalence of conditions causing dry mouth (such as diabetes, Sjögren's syndrome, or side effects from medications), and heightened consumer awareness of oral health. Demand is further supported by the convenience of lozenges as an on-the-go solution compared to sprays or rinses. Market trends indicate a shift toward sugar-free, natural, and functional formulations, with innovation focusing on extended relief and additional benefits like immune support or breath freshening. Competitive dynamics include pharmaceutical brands, oral care specialists, and wellness-focused companies, with distribution channels spanning pharmacies, e-commerce, and supermarkets. Regulatory considerations, such as FDA compliance for medical claims, also influence product positioning and marketing strategies.
