Report Overview

DTF (Direct-to-Film) transfer film is a specialized printing medium used in garment decoration, allowing designs to be printed onto a transparent film, transferred onto fabric, and cured with heat. Unlike traditional methods like screen printing or DTG (Direct-to-Garment), DTF printing is versatile, working on various fabrics (cotton, polyester, blends) and dark or light textiles without pretreatment. The film consists of a PET base layer coated with adhesive powder, enabling high-resolution, vibrant prints with durability and stretch resistance. The process involves printing with water-based pigment inks, applying adhesive powder, curing the design, and heat-pressing it onto the garment. DTF technology has gained traction due to its cost-effectiveness, faster production times, and ability to handle small-batch or customized orders efficiently. The market is driven by demand from small businesses, print-on-demand services, and fashion brands seeking high-quality, durable prints with minimal setup complexity.
