Report Overview

A Dual-Band WiFi Antenna is a type of wireless network antenna designed to operate on two distinct frequency bands, typically 2.4 GHz and 5 GHz. This dual-band capability allows the antenna to provide broader coverage and improved performance in wireless networks by catering to the different characteristics of each band. The 2.4 GHz band offers longer range and better penetration through walls and other obstacles, while the 5 GHz band provides higher data transfer rates and less interference, suitable for high-bandwidth applications. The antenna is engineered to receive and transmit signals on both bands simultaneously, enhancing the overall efficiency and reliability of the wireless network. It is commonly used in homes, offices, and public spaces where high-speed internet access and seamless connectivity are required.
