Report Overview

The dual-gas NDIR (non-dispersive infrared) gas sensor is an advanced analytical device designed to simultaneously detect and measure the concentrations of two specific gases, typically carbon dioxide (CO₂) and methane (CH₄), or other combinations such as CO₂ and refrigerants, using infrared absorption spectroscopy. This sensor operates by emitting infrared light through a gas sample; each target gas absorbs specific wavelengths of light, allowing the sensor to quantify their presence with high accuracy and selectivity. Dual-gas NDIR sensors are widely used in industrial safety, environmental monitoring, HVAC systems, and smart agriculture due to their reliability, low maintenance requirements, and resistance to cross-interference from other gases. Their ability to provide real-time, continuous monitoring makes them essential in applications where precise gas detection is critical for operational efficiency, regulatory compliance, or safety protocols.
