Report Overview

Ducted propellers, also known as shrouded propellers or Kort nozzles, are propulsion systems where a propeller is encased within a cylindrical or annular duct, enhancing thrust efficiency and reducing noise by optimizing fluid dynamics. This design is particularly effective in applications requiring high thrust at low speeds, such as marine vessels (tugboats, underwater vehicles), drones, and aerospace systems. The duct accelerates fluid flow around the propeller blades, improving hydrodynamic or aerodynamic performance while mitigating cavitation and vibration. Market demand is driven by industries prioritizing fuel efficiency, maneuverability, and noise reduction, with growing adoption in autonomous underwater vehicles (AUVs) and electric vertical takeoff and landing (eVTOL) aircraft. Technological advancements in materials (composites, lightweight alloys) and computational fluid dynamics (CFD) are further refining ducted propeller designs, expanding their applicability in both commercial and defense sectors.
