### Report Overview

Duplexers and Triplexers are electronic devices used in radio frequency (RF) communication systems to separate or combine different frequency bands. Duplexers are designed to handle two frequency bands, while Triplexers manage three. These devices are crucial in maintaining the integrity of signals and preventing interference in various applications such as mobile phones, satellite communication, and radar systems. Duplexers typically consist of filters that allow transmission and reception on separate frequencies, enabling full-duplex communication. Triplexers extend this functionality to include an additional frequency band, which can be used for different purposes such as transmitting control signals or receiving auxiliary data. They are engineered to have minimal insertion loss and high isolation between the bands to ensure efficient and reliable signal transmission.
