Report Overview

Dynamic Case Management (DCM) refers to a flexible, process-driven approach that enables organizations to manage unstructured or semi-structured workflows by dynamically adapting to changing requirements, data inputs, and business rules. Unlike traditional Business Process Management (BPM), which relies on rigid, predefined workflows, DCM emphasizes agility, allowing users to modify processes in real-time to accommodate exceptions, new information, or evolving business needs. It integrates multiple functionalities such as document management, collaboration tools, analytics, and decision automation to handle complex, knowledge-intensive cases across industries like healthcare, legal, insurance, and government. By leveraging AI, machine learning, and low-code/no-code platforms, DCM enhances efficiency, compliance, and customer experience while supporting end-to-end case resolution. The growing demand for digital transformation and the need to streamline ad-hoc processes are driving its adoption globally.
