Abstracts

An electric vehicle dynamometer is a professional device designed for testing and evaluating the performance of electric vehicles (EVs) and hybrid electric vehicles (HEVs). It accurately measures the output power, torque, and efficiency of the electric drive system by simulating various driving conditions, such as different speeds, accelerations, and loads, and can perform energy consumption analysis, battery performance evaluation, and thermal management testing. An electric vehicle dynamometer not only supports comprehensive performance testing at the vehicle level, but is also suitable for individual testing of key components such as motors and inverters. It is a key tool to ensure that electric vehicles are optimized in performance, meet safety standards, and improve driving range. In addition, modern electric vehicle dynamometers integrate advanced data acquisition and analysis systems, which can realize intelligent testing processes and improve the efficiency of R&D and quality control. The electric vehicle dynamometer market is experiencing significant growth, driven primarily by technological advances, stringent emission standards, and global requirements for vehicle performance and efficiency. With the rapid expansion of the electric vehicle (EV) and hybrid electric vehicle (HEV) markets, and the growing demand for the development of new energy vehicle models, automakers are increasingly relying on advanced dynamometers for precise powertrain testing and optimization. In addition, consumers' increased attention to vehicle safety and driving experience has prompted manufacturers to increase investment in new dynamometers to support more complex functional testing and data analysis. At the same time, the application of emerging technologies such as the Internet of Things (IoT) and big data analysis has further promoted the development of dynamometers towards intelligence and automation, improving testing efficiency and reducing costs. These factors work together to bring broad development prospects to the automotive dynamometer market.

The global Dynamometer for EV Motor market size was estimated at USD 115.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60% during the forecast period.
