### Report Overview

Edge Machine Learning (Edge ML) refers to the implementation of machine learning algorithms and models at the edge of a network, close to the source of data generation. This approach enables devices like IoT sensors, smartphones, and industrial equipment to process data locally, making real-time decisions without relying on constant communication with a central server or cloud. Edge ML optimizes data processing by reducing latency, conserving bandwidth, and enhancing privacy by minimizing the amount of data that needs to be transmitted. It is particularly beneficial in scenarios where immediate responses are crucial, such as autonomous vehicles, industrial automation, and smart city applications.
