### Report Overview

Beet sugar is a natural sugar extracted from beet roots and is often used as a substitute for sucrose. It is mainly composed of glucose and fructose, but also contains small amounts of sucrose and other sugars. Table sugar beet sugar is usually found in liquid or crystalline form and is used as a sweetener and flavoring agent in food processing. It has a sweet taste similar to sucrose, but is slightly less sweet than sucrose. Due to its natural origin and relatively low sweetness, beet sugar is considered a healthier alternative, especially for those who need to limit their sucrose intake. Edible beet sugar is widely used in food processing to make candies, biscuits, beverages, jams, sauces and other foods. It can also be used as an alternative sweetener in home cooking and baking, such as jams, sauces, baked goods, etc. Due to its relatively low sweetness, it generally requires slightly more sugar than sucrose to achieve the same sweetening effect.
