Report Overview

Electric insulating shoes are a specialized type of footwear designed to protect workers from electrical hazards in various industrial and electrical settings. These shoes are made from non-conductive materials, such as rubber or leather, and are equipped with a thick, insulating sole that prevents the flow of electrical current. The primary function of electric insulating shoes is to reduce the risk of electric shock by providing a barrier between the wearer's feet and potential electrical sources. They are typically used in environments where there is a high risk of exposure to live electrical circuits, such as in electrical maintenance, repair work, or construction. Compliance with safety standards, such as those set by the American Society for Testing and Materials (ASTM), ensures that these shoes meet specific requirements for insulating properties, resistance to wear, and overall durability.
