## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electric Stove Heater competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Electric Stove Heater production reached approximately 12 million units at an average price of \$350 per unit. These devices provide efficient and safe indoor heating with realistic flame effects, combining energy efficiency, instant heating, and smart temperature control. They are widely used in homes, hotels, and commercial spaces, meeting consumer demand for both warmth and aesthetic appeal. The global electric stove heater market is still dominated by premium European and American brands, which hold major shares due to their brand influence and technological edge, while Asian manufacturers are rapidly emerging with cost-effective solutions and supply chain efficiency, posing strong competition in the mid-to-low-end segment. Innovations focus on smart features (e.g., APP-based remote control, voice compatibility with mainstream ecosystems) and energy-saving technologies (e.g., inverter heating, low-power consumption materials), significantly improving energy efficiency. Future growth will rely on deeper penetration in cold regions and demand for high-end customization, though challenges persist from competition with traditional gas heaters and price volatility of raw materials like steel and copper.

The global Electric Stove Heater market size was estimated at USD 4206.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
