Abstracts

Electric two-wheelers drive systems are the components and technology used to power and control electric bicycles, scooters, and motorcycles. These systems typically include an electric motor, battery pack, controller, and various sensors. The electric motor, which can be hub-mounted or mid-drive, converts electrical energy from the battery into mechanical power to drive the wheels. The controller regulates the power flow and manages the performance of the motor, while sensors provide feedback on speed, torque, and battery status. Advanced drive systems may also feature regenerative braking to recapture energy during deceleration. These systems offer a clean, efficient, and quiet alternative to traditional internal combustion engines, contributing to sustainable urban mobility and reducing environmental impact.

The global Electric Two Wheelers Drive Systems market size was estimated at USD 4250.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
