Abstracts

A high-voltage cable for electric vehicles is a cable that carries an electric current and generates heat from the conductor. It is exposed to additional heat from the engine exhaust, so the ability to maintain sufficient heat resistance for an extended period of time is a critical feature of this cable. High voltage cables in hybrid and electric vehicles are color-coded to warn of their potential danger, usually in orange but some models have blue cables instead. Cables running internally through vehicles can generally be divided into two voltage categories ? low voltage, between 0 and 60 V, and high voltage, which typically means anything above 60 V.

The global Electric Vehicle High Voltage Cable market size was estimated at USD 2450.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.80% during the forecast period.
