Abstracts

The silicon carbide controller is mainly used to control the driving motor to achieve precise torque and speed output, ensuring the normal driving of the vehicle and greatly improving the efficiency of the entire system. The high-voltage battery of the vehicle outputs a direct current, which is rectified by a thin film capacitor and enters the driving circuit of the module components. The driving circuit is controlled by the control board to convert the direct current of the high-voltage battery into an alternating current that can be directly input into the driving motor, thus completing the entire inverter process.

The global Electric Vehicle Silicon Carbide Controller market size was estimated at USD 2650.38 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 28.40% during the forecast period.
