Abstracts

Wireless charging for cars looks something like this: The driver pulls into a garage or parking space and positions the front of the car over a power mat (Gruzen calls it a ?pizza box?) on the ground. Some charging pads will be built into the surface and won?t protrude upward at all. If the car is positioned right, charging begins automatically. The technology is based on inductive charging, which involves electricity being transferred via an air gap between two magnetic coils. It?s similar to how wireless phone chargers work, but here the scale is significantly larger.

The global Electric Vehicles Wireless Charging market size was estimated at USD 157.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 46.28% during the forecast period.
