Report Overview

An Electrical Cable Recycling Unit is a specialized industrial machine designed to process and recycle electrical cables in an environmentally friendly manner. This unit is engineered to separate and recover valuable materials such as copper, aluminum, and plastic from waste electrical cables. It operates by shredding the cables into smaller pieces, which are then subjected to processes like magnetic separation, air classification, and eddy current separation to extract and purify the metallic components. The remaining non-metallic materials, primarily plastics, can be further processed or sold as recycled raw materials. The Electrical Cable Recycling Unit not only contributes to waste reduction and resource conservation but also supports the circular economy by providing a sustainable solution for managing end-of-life electrical cables.
