Report Overview

Electrical Silicon Steel Sheet, also known as Electrical Grade Silicon Steel or Silicon Electrical Steel, is a type of steel alloy that is specifically engineered for use in electrical applications. This material is characterized by its high electrical conductivity and magnetic properties, which make it ideal for use in transformers, electric motors, generators, and other electrical equipment. The steel sheet is manufactured by adding a controlled amount of silicon (typically between 2% and 5%) to the base steel, which enhances its magnetic permeability and reduces hysteresis loss. This results in improved efficiency and reduced energy consumption in electrical devices. Electrical Silicon Steel Sheets are available in various grades, each with specific magnetic properties tailored to different applications. They are often laminated to reduce eddy current losses and are used in the construction of cores in electrical machines and power distribution equipment.
