Abstracts

Electro-Hydraulic Control Systems (EHCS) are advanced control systems that combine electrical and hydraulic components to manage the movement and operation of machinery. These systems use electrical signals to control hydraulic actuators, which in turn regulate the flow of hydraulic fluid to achieve precise motion control in various applications. EHCS are widely used in industries such as manufacturing, aerospace, automotive, and heavy machinery because they offer high power density, precise control, and rapid response times. The electrical components, such as sensors, controllers, and solenoids, communicate with hydraulic components like pumps, valves, and cylinders to perform complex tasks with high accuracy and reliability. EHCS are particularly valued for their ability to automate processes, enhance system performance, and improve efficiency in demanding environments where precise and powerful motion control is essential.

The global Electro Hydraulic Control Systems Ehcs market size was estimated at USD 2850.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
