Report Overview

An electroacoustic siren is a type of warning device that produces a loud and piercing sound using a combination of electrical and mechanical components. It is designed to alert and warn people in emergencies or to indicate specific events. The electroacoustic siren typically consists of a sound-producing element, such as a motor-driven rotor, a piston, or a vibrating diaphragm, and an electronic control circuit. The control circuit generates an electrical signal that is fed to the sound-producing element, causing it to vibrate or rotate rapidly. This vibration or rotation creates air pressure variations that result in a loud and distinctive sound.
