## Abstracts

An electrodeposited copper foil machine is specialized equipment used in the manufacturing of high-quality copper foils through an electrochemical process. In this process, copper ions from a copper sulfate solution are deposited onto a rotating drum or belt that serves as a cathode. The machine precisely controls the deposition parameters, such as current density, temperature, and electrolyte composition, to produce uniform and thin copper foils. These foils are essential components in various industries, particularly in the production of printed circuit boards (PCBs), lithium-ion batteries, and other electronic applications. The machine's ability to produce copper foils with consistent thickness, high purity, and excellent mechanical properties makes it crucial for the high-tech electronics and energy storage sectors.

The global Electrodeposited Copper Foil Machine market size was estimated at USD 285.4 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.45% during the forecast period.
