Report Overview

Electrolytic Paper, also known as electrolytic grade paper or ion exchange paper, is a specialized type of paper designed for use in electrolytic cells and ion exchange processes. It is manufactured from high-quality cellulose fibers that have been treated to enhance their chemical stability and electrochemical properties. The paper is characterized by its low electrical resistance, high mechanical strength, and excellent resistance to chemical attack, making it suitable for applications where it must withstand harsh conditions. It is often used in the production of chlorine, caustic soda, and other chemicals through the process of electrolysis, as well as in water treatment and purification systems where ion exchange is required. The paper's ability to facilitate the transfer of ions without significant loss of electrical energy is a key factor in its utility in these industrial processes.
