Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electronic Detonator Chip competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Electronic detonators are composed of explosives, charge heads, electronic control modules, rubber plugs and foot lines. The electronic control module is the core component of electronic detonators. It controls the detonation process through the electronic control module. Compared with traditional industrial detonators, it has higher safety, reliability and blasting efficiency. The electronic control module is the core component of electronic detonators, integrating multidisciplinary technologies such as microelectronics, electronics, communications, pyrotechnics and new materials, among which chip design technology is the most core technology. Electronic detonator chips are the core components of modern blasting technology. Through the built-in microprocessor, they can achieve precise control of explosion delay time and explosion intensity. They have functions such as detonation delay time control, detonation energy control, built-in detonator identity information code and detonation password, etc. They can test their own functions, performance and the electrical properties of the detonator ignition element, and can communicate with the detonation controller and other external control devices.

Market driving factors:

- Policy-mandated substitution:** The Ministry of Industry and Information Technology requires that the production of ordinary industrial detonators be completely stopped by 2025, and the penetration rate of electronic detonators exceeds 90%, which has promoted the rapid growth of the market.
- Improved safety and efficiency:** The dud rate of electronic detonators has dropped to below 0.02%, and the mine accident rate has dropped by 50%, which has improved the safety of operations.
- Increased infrastructure investment:** Super projects such as the Sichuan-Tibet Railway and the West Route of the South-to-North Water Diversion Project have

driven an annual demand increase of more than 300 million rounds. Technological progress: Technological progress such as breakthroughs in chip localization, intelligent upgrades, and substitution of environmentally friendly materials have promoted market innovation and development.

The global Electronic Detonator Chip market size was estimated at USD 1277.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
