Abstracts

Lithium oxalate borate (BOB) is used as an electrolyte additive in lithium manganate and nickel cobalt lithium manganate type lithium batteries, which can effectively form a very stable and tough protection layer on the surface of lithium manganate or nickel cobalt manganese cathode material. film, thereby inhibiting the reaction of the battery cathode material with the electro-hydraulic active components during charge and discharge. One of the technical routes of BOB products is: use oxalic acid, boric acid and lithium hydroxide to react in the aqueous phase, obtain a crude product containing lithium bis-oxalate borate after high temperature dehydration, and then use solvent extraction, concentration, evaporation, separation and drying under reduced pressure, Finally, electronic grade lithium bis-oxalate borate products are obtained.
