Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Electronic Grade UHP Helium competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Electronic Grade UHP Helium is an inert gas used in microelectronics manufacturing with a purity exceeding nine-nines, primarily utilized in wafer fabrication for heat exchange, chamber purging, and lithography systems, being critical to the process environment. In 2024, the global production volume of Electronic Grade UHP Helium was 2.71 million tons, and the average price was \$50/ton. The 2024 annual production capacity per single line was approximately 10,000 tons, and the average gross margin was approximately 53%. The Electronic Grade UHP Helium supply chain consists of Upstream, Midstream, and Downstream segments. The Upstream segment mainly focuses on natural gas purification and liquefaction of crude helium, with top supplier representatives including ExxonMobil, Linde, and Air Products; the Midstream segment concentrates on the ultra-high purity refinement, analytical testing, and specialized storage and transportation of helium; the Downstream market covers microelectronics manufacturing fields with stringent gas purity requirements, specifically including Integrated Circuits and Display Panels, with top Downstream company representatives being TSMC, Samsung Electronics, and BOE Technology. As global integrated circuit manufacturing processes continue to advance toward finer nanoscale nodes (such as 3nm, 2nm) and new display technologies (like high-resolution OLEDs) are widely adopted, the purity requirements for the manufacturing environment atmosphere have reached unprecedented levels. Electronic Grade UHP Helium, due to its irreplaceable inertness and superior thermal conductivity, faces continuous upgrades in consumption volume and quality standards in DUV lithography, etching, and wafer cooling. Given the certainty of semiconductor capacity expansion and the strategic

importance of helium as a scarce resource, the Electronic Grade UHP Helium market is projected to maintain high prosperity and robust structural growth.

The global Electronic Grade UHP Helium market size was estimated at USD 136.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Electronic Grade UHP Helium market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
