Report Overview

An Electrostatic Chuck for LCD, also known as an Electrostatic Cling Chuck, is a specialized component used in the manufacturing process of Liquid Crystal Displays (LCDs). This device serves as a temporary substrate for holding glass panels during various stages of the LCD fabrication process, such as photolithography, etching, and cleaning. The chuck operates on the principle of electrostatic attraction, where an electric field is generated between the chuck and the glass panel, causing the panel to adhere to the chuck without the need for mechanical clamps. This non-contact holding method minimizes the risk of damage to the delicate glass panels and ensures precise alignment and uniform processing. The Electrostatic Chuck for LCD is designed to provide a stable and secure platform for the panels, facilitating high-yield manufacturing and enhancing the overall quality of the LCD products.
