Report Overview

The elevator phone system is a critical communication device installed in elevators to ensure passenger safety by enabling direct contact with emergency services, building management, or maintenance personnel in case of mechanical failure, entrapment, or other emergencies. These systems typically consist of a hands-free or handsets-based phone unit connected to a centralized monitoring service or a public emergency line, often mandated by building codes and safety regulations. Modern variants may integrate with IoT-enabled platforms, allowing real-time diagnostics, automated alerts, and two-way communication via cellular, VoIP, or landline networks. The system's reliability, compliance with regional safety standards (such as ASME A17.1 in the U.S. or EN 81-28 in Europe), and interoperability with emergency responders are key defining features. As urbanization and high-rise construction increase globally, demand for advanced, code-compliant elevator phone systems continues to grow, driven by stricter safety norms and technological advancements in smart building infrastructure.
