### Report Overview

An Email Warmup Tool is a software solution designed to gradually and systematically build the reputation of a new email sender or IP address with email service providers (ESPs). This is achieved by slowly increasing the volume of emails sent over time, allowing the ESPs to recognize the sender as legitimate and reducing the likelihood of emails being marked as spam. The tool typically employs a structured schedule to ramp up email delivery, starting with a small number of recipients and expanding the list incrementally.
