### Report Overview

The Emergency Disconnect Safety System (EDSS) is a critical safety feature designed to rapidly and safely disconnect a vehicle from its power source in emergency situations. This system is typically found in electric or hybrid vehicles and serves as a fail-safe mechanism to prevent electrical hazards, such as electrocution or fire, during incidents like collisions or when the vehicle is submerged in water. The EDSS is activated either manually, through a switch or lever, or automatically, triggered by sensors that detect an emergency condition. Upon activation, the system ensures that the high-voltage electrical connections are disconnected, thereby isolating the vehicle's electrical components and reducing the risk of electrical shock to rescue personnel and the public. This system is an essential component of vehicle safety, highlighting the importance of rapid response and protection in emergency scenarios.
