### Report Overview

Emtricitabine and Tenofovir Disoproxil Fumarate Tablets is an antiretroviral medication used for the treatment of human immunodeficiency virus (HIV) infection. This product combines two active pharmaceutical ingredients: Emtricitabine, a nucleoside reverse transcriptase inhibitor (NRTI), and Tenofovir Disoproxil Fumarate, a nucleotide reverse transcriptase inhibitor (NtRTI). Both components work synergistically to inhibit the activity of the viral reverse transcriptase enzyme, which is essential for the replication of HIV. By suppressing the enzyme, the medication prevents the virus from multiplying and spreading, thereby reducing viral load and helping to slow the progression of HIV infection. This medication is typically prescribed as part of a combination antiretroviral therapy (cART) regimen, which may include other antiretroviral drugs to maximize treatment efficacy and minimize the risk of viral resistance.
