### Report Overview

Enameled cookware refers to metal pots, pans, and other cooking vessels coated with a layer of porcelain enamel—a glass-like material fused to the metal surface at high temperatures. This coating provides a non-reactive, non-stick cooking surface that resists corrosion, prevents metallic flavors from leaching into food, and offers vibrant, easy-to-clean finishes. Typically made from cast iron or steel, enameled cookware combines the heat retention of traditional metal cookware with the aesthetic and functional benefits of a smooth, durable enamel coating. Popular for its versatility, it is suitable for stovetop, oven, and even serving use, appealing to home cooks and professional chefs alike.
