## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Enameled Round Copper Wire competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Enameled round copper wire is an electromagnetic wire made of high-purity round copper wire as the conductor substrate, which is coated with insulating paint film multiple times and cured by high-temperature baking. Its core process includes copper wire annealing, paint coating (such as polyester, polyimide and other resins), multi-layer baking and cooling and shaping, and finally forms a composite structure with excellent electrical insulation, mechanical strength and weather resistance. The explosion of new energy industry and the wave of technological upgrading are driving the industry to accelerate its evolution towards high performance, green and global competition. With the rapid development of electric vehicles and renewable energy industries, the demand for high-performance enameled wire has increased significantly. Advances in coating technology and material science have enabled the production process of enameled round copper wire to be continuously optimized, improving the product's conductivity, heat resistance and mechanical strength. As market demand grows, more and more companies are entering the enameled round copper wire market, leading to intensified competition. The production cost of enameled round copper wire is mainly affected by copper price fluctuations. Rising copper prices may lead to increased production costs, thus affecting product prices and market competitiveness. At the same time, the risk of technological substitution is increasing. Aluminum enameled wire is accelerating the replacement of copper wire in the home appliance field with its cost advantage, forcing general round wire production capacity to transform to high-end.

The global Enameled Round Copper Wire market size was estimated at USD 2769.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
