Report Overview

Enameled Round Wire is a type of electrical wire that has been coated with a thin layer of enamel insulation. This enamel is typically made from a glass-like material that is applied to the wire through a process called enameling. The primary purpose of this insulation is to protect the wire from mechanical damage, moisture, and other environmental factors that could compromise its performance. Enamelled Round Wire is commonly used in various electrical applications, such as transformers, inductors, and coils, where high dielectric strength and insulation resistance are required. The round shape of the wire allows for flexibility and ease of installation, while the enamel coating ensures safety and reliability in electrical circuits.
